### 8d NLS LRIS Beginner

 **QUOTE**

by **Othello** » 02 Apr 2015, 09:14

Dear Charles

first of all thank you for your interesting and helpful website.

I have bought above device just one week ago and did already some tests

To proceed my testing i need some answers to basic questions

1. If i get new to a person and test without any idea what is wrong i used the etalon body of man / woman

so my question is what does the system really scan here is it just the skin on surface or are all the organs basically included

So i thought i could go from here then deeper following the outcoming diseases. What ethalon doe i take for aura scan?

2. If i want to test wether a supplement like fruits cake vegetables or medicine ect. is strenghten or weakening a person shoud i take then the body as ethalon or anything else because i noticed that on different organs i get different results. So what is representitive for that person.

3. Is it possible to determine also the real quantity of eg a certain vitamine eg vitamin D3 in the body (eg 50 ng/ml) so i know wether i have to eat supplements or not.

4. I am using the vector expert 03 software as i could see from the former people the last example input of patient cards were from the year 2013

so i guess the software is from 2013 Is this the latest version ? You wrote that in newer versions the reduce the number of ethalons Is it then better to use an older version What is the difference between the old and the new version.

I thank you very much for your answer

Hello Othello,

1. The etalon man/woman is very general.

I prefer to scan first the cross sections of the body, starting with the Sagittal Thoracotomy, because there you can see a number of different organs, ans may have an idea where something may be wrong.

It is also nice for checking whether something is good or bad with the Vegetotest.

In Comparative Analysis and then clicking on Worsening and Improvement, you can see where it changes.

2. Next you should Vegetotest on different organs.

You may find, that certain supplements or Vitamins do give different results on different organs.

3. It is NOT sufficient to look only at WQeakening or Strenghtening percentages.

You must look INTO the Vegetotest scans, in order to see what it did to a certain disease.

ONLINE

Only then, you can make a decision.

4. The Vector3 is the latest working version for the LRIS.

Dear Charles

thks for your info

1. if i want to test a person whether he / she can eat certain food like bread, meat, cheese or anything else

how would i proceed best without looking first what diseases this person has.

2. In your programm description i read sometimes that you have to press the moon button where should that be i

can not find this kind of button.

3. under point 3. of your answer you say one has to look into the vegetest scan but did you describe in your report already

how to look into or where can i find this describitionl

4. is it also possible to give treatment of homeopatic direct to the person without first reprint it into something like water alcohol ....

thks

1. In the Topics list there is a chapter FOOD.

Alternatively you can put saubstances in a glass, which you place in the cup.

Then do Vegetotest on.

Do this aginst several organs.

2. Forget the MOON button.

Use the right software.

Use the P or D.

3. See what I have written in \*Questions\*.

4. While you are making a medicine, one has to hold the headphones on.

At the same time, the medicine is being prepared, the person gets a treatment already.

Hello everyone,

thank you for having this nice platform to exchange information on the 8D-LRIS. We just bought this device from the manufacturer with two language versions. One version is not running due to a defect file. The manufacturer did not send a link so far where we could download a new version of the damaged file.

The English version is running. Sometimes there is Russian text. Is that normal? When we start with a new patient card there are always following complaints to choose of: Fatigueability, Pain in Arms, Hands, Joints and following diagnoses to choose from: Arthrosis, Neuralgia, Resection of right shoulder, Right lung resection and Strained Juncture Ligaments. It is not possible to change these options. Why are the options to choose from are so limited? Is there anything else we could do to set different complaints and diagnoses?

During the harmonise process the device does not realise if one takes off the headphones.

It does with the meta function. Why is that?

Thank you a lot in advance for your great support.

Regards and happy Eastern,  
Newbie02

ONLINE

When you start the program, on the first screen you see \*Customize\*.  
Click on it.

In the box Language, click on .f.i. English, or German.

A popup box appears and you are asked: \*Translate also database?\*Click on \*Yes\*.

That is all.  
And unmark \*Sound\*, because that may be irritant.

Click Exit and Start.  
You have to do this only once.

I never use this complaint box, because it lets you scan too many items.  
I prefer to handle everything myself.

When you use the system **NEVER take the headphones off.**
